## 3G Network Shutdown & Device Updates

Dear Customer,

[Click here](#) For the latest Firmware

As you're aware, the telecommunications landscape is rapidly evolving. With the ongoing 3G network shutdown and the shift to newer infrastructure, ensuring a reliable connection for your customers is more important than ever.

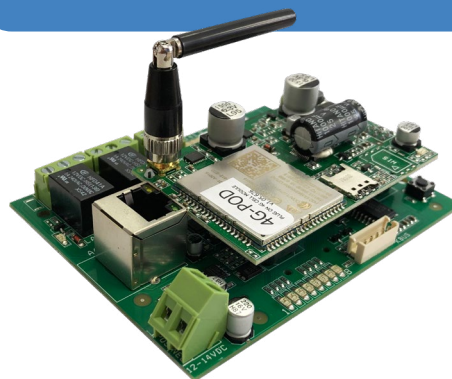

To help keep your sites online and unaffected by network changes, we strongly recommend confirming that all 4G-IP communicators are running the latest software version at the time of installation.

Completing these updates now will help prevent future service disruptions and ensure ongoing compatibility with current carrier requirements. Our goal is to support you in making sure your installations remain truly "set and forget."

Thank you for your continued partnership and for helping keep your customers' sites secure.

Best regards,  
AAP Team
