Battery	Included
Function	Remote hush & test button
Frequency	433MHz
Enclosure	Indoor Use Only
Mounting	Wall mount bracket
Dimensions	112 x 40 x 19mm (incl wall mount bracket)

Overview

The 'AAP-REMOTE' directly interconnects with the 'AAP-SMOKE' & 'AAP-HEAT' fire detectors.

This allows users to test or hush the fire detection system from a central & easy to access location.

Smoke & heat detectors should be tested once every week, making the 'AAP-REMOTE' a valuable tool for large systems or detectors that are difficult to access.

Hush Button

The hush function on the remote (or any connected devices) only works when the system has been activated from a real fire or heat source. **DO NOT** attempt to hush the detectors when the system is under test.
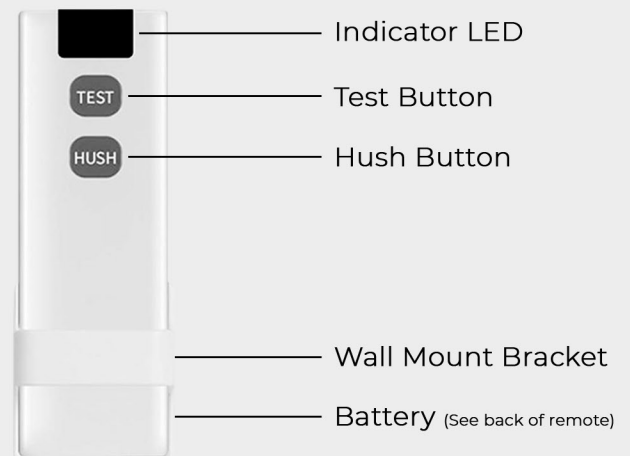

Test Button

Press the test function on the remote or any of the interconnected devices & the system will sound for roughly 15 seconds. **DO NOT** press any other remote or detector buttons until the beeps from all detectors have silenced.

- Indicator LED
- Test Button
- Hush Button
- Wall Mount Bracket
- Battery (See back of remote)

Learn Procedure

1. Pair all 'AAP-SMOKE' & 'AAP-HEAT' detectors as detailed in their respective product manuals.

2. Press & hold the 'Primary' 'AAP-SMOKE' or 'AAP-HEAT' detector button until the green LED flashes 3 times & then release (the red LED on the detector will begin to fast flash for 1 minute while waiting to learn a new device).

3. Press & hold the 'TEST' button on the remote you wish to pair until the red LED flashes 2 times & then release. The red LED will fast flash once and then slow flash 3 times to indicate a successful learn.

Defaulting Procedure

1. Press & hold the 'TEST' button until the red LED flashes 4 times & then release. The red LED will flash 4 times slowly to indicate a successful default.
