# ECi (248 Zone Control Communicator) **ECi**

Arrowhead Alarm Products Ltd

# Program Summary Guide

# SOFTWARE VERSION

This manual relates to ECi control panels with software version V10.3.47 and above

# Special Programming Operating Procedures

### Programming addresses that have 32 options (Areas, Outputs & Keypads)

When in Program mode there are many program addresses (eg P3E) where there are 32 options that can be selected. When in these locations the selection is always a two digit number, eg at P3E you can select up to 32 areas, if you wanted to select areas 1, 5, 9, 10, & 15 the data entries would be 01, 05, 09, 10, 15.

If you wanted to select all 32 you can press and hold the "9" button for 2 seconds to turn on all 32 options, if you wanted to turn them all off you can press and hold the "0" button for 2 seconds to turn them all off.

### <u>Deleting User codes, Account Codes, Telephone Numbers, etc</u>

If a numeric entry such as user codes, monitoring account codes, telephone numbers, etc, needed to be deleted you can press and hold the <Control> button then press the <0> button (maintained for compatibility with the current ELITE S operation) or you can press and hold the <0> button for 3 seconds to delete the entry.

### **Programming LCD custom text**

All LCD text is stored in the control panel memory and transferred to all keypads so the panel remains the master database at all times. If user text is changed (eg User Name, Area Name, Output Name, etc) the new text is broadcast to every LCD keypad on the bus as soon as the enter button is pressed to save the changes so all keypads have the new text immediately. If a new LCD keypad is added to the system the panel broadcasts the CRC's for all of the text blocks so the keypads can compare their CRC with the panels. If there is a difference in the CRC's indicating that the LCD and panel text don't match a request is made by the keypad to download all text blocks where the CRC's don't match ensuring all keypads stay up to date with the panel. This task is carried out in the back ground and does not have to be initiated by the installer or end user.

### **Key-switch Programming**

The Key-switch function has now been moved to being a zone function. If any arm/disarm option is turned on at P120E the associated zone will now be a key-switch, eg P120E48E options 1 & 3 turned on would mean that zone 48 is now a key-switch that can arm and disarm the area/s assigned at P121E48E.

### **LCD Keypad Operational Mode**

The full LCD keypad will always show "Areas Armed" as soon as any area associated with the keypad is armed. If option 4 is off at P96E for the associated keypad the "Areas Armed" will show one area at a time on the bottom line of the display. The full Area name will be shown. The area names will cycle through showing all currently armed areas. An armed area could be fully armed or stay armed. If some areas associated with the keypad are not armed the "Ready LED" will still turn off when zones are unsealed but they will not be displayed while "Areas Armed" is on. To see any unsealed (not Ready) zones you can press the "Enter" button to switch to the zone display menu. After 10 seconds of no button presses the display will revert back to the "Areas Armed" display. Alternatively if the "Down Arrow" button is pressed while the display is showing "Areas Armed" the display will change from showing the individual area names to area numbers. Up to 7 two digit area numbers can be displayed on the bottom line. If there are more than 7 areas armed the display will cycle through 7 area numbers at a time repeating the cycle once it has shown all areas. By repeatedly pressing the "Down Arrow" the user can control what areas are displayed on the bottom line. If the "Down Arrow" is not pressed for 15 seconds the display will revert back to normal.

If option 4 is on at P96E for the associated keypad the "Areas Armed" will show up to 7 area numbers on the bottom line and will cycle through the list if more than 7 areas are armed. If the "Down Arrow" button is pressed the user can control what areas are displayed on the bottom line. If the "Down Arrow" is not pressed for 15 seconds the display will revert back to normal.

# ECI BULK COPY FUNCTION

There are a number of program locations where selected program data can be copied to a range of similar program addresses. The list of these program locations is shown below. As an example if user 100 was set up as a template and users 101 to 200 were to all have the same program options, by entering in P17E 100E followed by 101E then 200E the panel will copy all of the programmed data for user 100 to users 101 to 200. This feature can be performed multiple times, eg user 250 could be set up as a template then it could be copied to users 251 to 300.

Bulk COPY a User to a range of Users

Bulk COPY an Output to a range of Outputs

Bulk COPY an Output to a range of Outputs

Bulk COPY an Output to a range of Outputs

Bulk COPY an Area to a range of Outputs

Bulk COPY an Area to a range of Areas

Bulk COPY an Area to a range of Areas

Bulk COPY an Area to a range of Areas

Bulk COPY an Area to a range of Keypads

Bulk COPY a Keypad to a range of Keypads

Bulk COPY a Keypad to a range of Keypads

Bulk COPY a Keypad to a range of Keypads

Bulk COPY a Zone to a range of Zones

Bulk COPY a Zone to a range of Zones

Bulk COPY a Zone to a range of Zones

# ECI LCD TEXT PROGRAM SUMMARY GUIDE

There are a number of program locations where custom text names can be programmed. These custom text names are used by the LCD keypad when displaying area names when armed and also when viewing events in memory mode.

| P16E     | 1-2000F | Program LCD KP "User" Name Text                       | Program LCD KP "User "Name    |

# DTMF COMMAND CONTROL SEQUENCE

If DTMF Command Control has been enabled the operation is performed as follows.

### Call the control panel.

When the panel answers it will play the message "Enter your code followed by the # key".

At that point enter in your DTMF Code (program location P63E for Area Arm/Disarm or P175E12E for Output control) followed by the # key on the phone.

### **DTMF Arming and Disarming**

If for example the DTMF code to remotely arm and disarm Area 1 (P63E1E) was 1234 and Area 1 was disarmed, when you enter the Area 1 DTMF code;

1234 # - (you will hear the message "Area 1 Disarmed")

If you then press the \* key it will change the state or Area 1, eg

\* - (you will hear the message "Area 1 Armed")

### **DTMF Output Control**

If for example the DTMF code to remotely control Outputs (P175E12E) was 9876 and you were controlling Output 1 (which was currently Off), when you enter the Output DTMF code followed by output 1 (01); 9876 01 # - (you will hear the message "Output 1 Off")

If you then press the \* key it will change the state of Output 1, eg

\* - (you will hear the message "Output 1 On")

### **Exiting DTMF Control Mode**

When all DTMF remote control functions are completed you can either hang up the phone and the control panel will hang up automatically in 15 seconds or you can press;

**00 #** - (you will hear "Goodbye") and the panel will hang up immediately.

# DISPLAY APP SERIAL #, IP & MAC ADDRESS AT KEYPAD

When the panel is in normal mode (ie not in program mode) it is possible to display via the EC-LCD the currently assigned IP address for the panel, the MAC address, and the app Serial number. There is a similar display function using the Service menu on an EC-TOUCH but it must have Version 8.05.220414 or later firmware.

### To view the APP Serial Number

At the LCD keypad press and hold the <7> button for 4 seconds until the display shows the panels APP Serial number. To exit the display mode press the <ENTER> button.

### To view the MAC Address

At the LCD keypad press and hold the <8> button for 4 seconds until the display shows the panels MAC address. To exit the display mode press the <ENTER> button.

### To view the IP Address

At the LCD keypad press and hold the <9> button for 4 seconds until the display shows the panels IP address. To exit the display mode press the <ENTER> button.

# DISPLAY CURRENT PATH To The INTERNET

When the panel is in normal mode (ie not in program mode) it is possible to display via the EC-LCD the current path the panel is using to connect to the internet. This function was released at firmware version 10.3.42.

### To view the Current Internet Path

At the LCD keypad press and hold the <6> button for 4 seconds until the display shows the panels Internet path. The options are "Ethernet" or "4G". To exit the display mode press the <ENTER> button.

# **Automatic Control of Doors**

When there is a need to unlock a controlled door during the day and keep it unlocked, this can be achieved two ways. The first is to program a Time Zone to the output (P44E), the second is to program the area disarm indication to the output (P49E).

### Unlock on a Time Zone

Any of the 32 Time-zones can be assigned to outputs 1-32. This function can be used to unlock a controlled door so the door will remain unlocked while the T/Z is on and relock it when the T/Z is off allowing normal timed access control through the door when the T/Z is inactive. If a TZ has turned an Output ON the TZ will override any reset time programmed for the Output. A TZ can be linked to holidays (P174E option 1 Off) so that the TZ will not unlock the door when a holiday is active. The reset, pulse or chime timers can resume controlling the Output once the TZ has ended and the output is OFF. The CONTROL to Output function is the only operation that can override the Output while the TZ is active (see additional comment below).

### **Unlock when Disarmed**

Each Area can have a disarm indication assigned to an output to unlock a controlled door so the door will remain unlocked while the alarm is disarmed and relock it when the alarm is armed allowing normal timed access control through the door afterhours. This function allows a door to be unlocked only when the premises are occupied and relocked when the premises are vacated (ie the alarm is armed). If an Area Disarm has turned an Output ON this will override any reset time programmed for the Output. The reset, pulse or chime timers can resume controlling the Output once the Area is armed and the output is OFF. The CONTROL to Output function is the only operation that can override the Output while disarmed (see additional comment below).

### <CONTROL> override of an unlocked door

When an output is on because a TZ is active or the alarm is disarmed the output will stay on until the TZ is inactive or the alarm is armed.

At times there may be reasons why the door needs to be locked even if a TZ is active or the alarm is disarmed, (eg an employee is at work on a public holiday and the alarm is disarmed but they want the door to be locked). Under these special conditions it is possible to program the output connected to the door so that it can be controlled using the <CONTROL> button at the keypad closest to the controlled door. At Program address P83E the output controlling the door can be assigned to a keypad close to the controlled door. By pressing the control button for 2 seconds (option 8 must be on at P96E to allow direct control of the output) the door control can be overridden. If the control button is pressed for another 2 seconds it will unlock the door again.

| On Board Tamper Ignored |            |            |            |                       |            |             |            | <u>ON</u>  |
| On Board Tamper Active  |            |            |            |                       |            |             |            | off        |

DIP switch number 8 disables the on-board tamper input if not required. DIP Switches 4, 5, 6, & 7 are currently unused.

There is an LED associated with every output. They are labelled OUTPUT 1-4. LED 1 relates to output 1 through to LED 4 relates to output 4.

At power up the LED's will cycle in numerical order back and forth until communications is established with the main control panel. If there is an address clash (eg two output expanders set to the same address number) they will continue to cycle until the clash is resolved by changing the switches on one of the expanders.

Under normal conditions the LED's will be off when the output is off. When an LED is on that indicates the associated relay is on.

The output expander can be powered from the main control panel (as shown on the connection diagram on the previous page) or there is an optional plug in 1A power supply module that can be fitted to the output expander. When the optional power supply module is fitted the 13.8V (POS) from the panel must not be connected, only the 0V from the main control panel should be connected to the output expander 0V.

# EC-A2 Interface DIP Switch settings

| Disable EC-A2 Tamper | -         | -         | <u>ON</u> | If DIP SW8 is ON the EC-A2 tamper is disabled                                   |

# Contact ID Reporting Code Summary

In addition to the programmable Contact ID Event Code assignments defined at P157E, P158E, P159E, P175E (9E-11E) there are a number of fixed event codes. The programmable and fixed event codes are all listed in the table below. Associated with the fixed and programmable event codes, there are a number of extension codes, that are also listed below. The list of extension codes is for your reference only and can not be changed in programming. For "Users" Above 998 the panel will report all as user 998 (eg users 998-2000 will all be reported as 998).

SIA Reporting Code Summary

Most of the SIA Event Codes are fixed within the panel but some locations such as zones at P196E (1-248E) and Panic/Fire/
Medical at P197E (1-3E) can have a user defined report code from the table below. To follow are the default SIA reporting codes.
Unlike CID, users 1-2000 will be reported as 1-2000 in SIA format.

| Offlike CID, users 1-2000 will be reported as 1-2000 iii SIA format. |                |                  |
|--|----------------|------------------|

When you program one of the numbers in column 2 below at any of the addresses at P196E or P197E then all of the SIA codes associated with that event type will automatically be loaded, eg if Zone 10 (P196E10E) was programmed with a "4", then when zone 10 activates it will send the fire alarm (FA) and the fire alarm restore (FH) and if zone 10 was bypassed it will send the fire bypass (FB) and the fire un-bypass (FU).

| CHART FOR THE PROGRAMMABLE SIA EVENT CODES |                   |       |         |        |               |         |                    |               |                   |
