FEATURES

TECHNOLOGY FOR HIGHEST RELIABILITY

Quad Zone Logic - Improved Patented Technology

Quad Zone Logic provides multi segmented detection zones throughout the detection area. An alarm signal is created by the cumulated total IR energy of each zone. It is designed to provide 4 to 8 zones for a human sized object to create sharp and maximum signals for stable detection. Spot temperature changes, i.e. by rodents or curtains etc., may affect only one or two zones at the same time creating a smaller detection signal. These signals are further analysed by the "ECO" Chip and signal processing circuit for accurate detection and filtering out of false alarms.

- Technology to Back Up Quad Zone Logic

Obtains an accurate focal length for each detection zone and maximises the performance of Quad Zone Logic.
